

Project Description

🏋️ Bodyshape – Fitness Website

Bodyshape is a modern, responsive fitness website built using **HTML5** and **Tailwind CSS**.

It is designed to help fitness enthusiasts achieve their goals with a sleek design and easy navigation.

🌟 Features

- ⚡ Fully responsive layout (mobile, tablet & desktop)
- 🎨 Clean and modern UI
- 🧱 Built with Tailwind CSS utility classes
- 🏋️ Fitness-focused design
- 🖼️ Banner section with overlay
- 📞 Footer

🛠️ Technologies Used

- **HTML5**
- **Tailwind CSS**
- **Font Awesome (for icons)**

⚙️ Setup Instructions

To run this project locally:

1. ****Clone or Download the Repository****

```
` `` bash
```

```
git clone https://mdshofiqsarker.github.io/Gym/
```

Challenges

While developing the **Gym Website**, I faced a few design and layout challenges — especially related to alignment, positioning, and responsiveness.

1. Hero Section

- The main heading and background overlay were slightly misaligned on different screen sizes.
- I had to adjust flex and padding values to make the text stay centered in both small and large screens.

2. Fitness Plans & Nutritions Section (Border Issue)

3. Subscribe To Plans (Position Problem)

4. Why Join With Us (Image Alignment).
